

# HD ScreenStar Conversion Lenses

*More solutions and flexibility with the new standard in conversion lenses.*

### HD Image Quality for More Image Impact

Navitar now offers High Definition ScreenStar wide-angle conversion lenses, designed especially to match the performance of today's HD projectors. There is absolutely no loss of HD quality in the conversion, which results in the best possible image for the user.

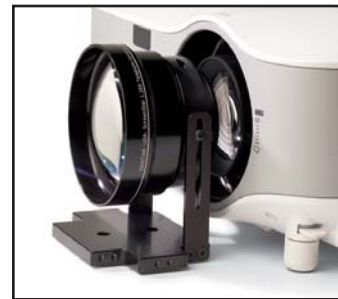

### First in Their Class

These lenses are the first available HD conversion lenses in the industry and as with all of our ScreenStar lenses, provide the functionality to either increase image size or throw distance simply by placing the lens in front of the existing prime lens.

### HD Design

The HD ScreenStars are designed with a large aperture to prevent vignetting and provides a great "sweet spot" for ease of set up. The HD lens design has excellent image contrast and resolution.

The first lenses released in the lineup are the 0.8X and 0.65X HD ScreenStars. A stabilizing leg that anchors to a table or shelf is included with each lens and optional ceiling mounts are available separately.

Product #	Description	List Price
HDSSW08	0.8X HD ScreenStar Wide Angle Conversion Lens	\$1,595
HDSSW65	0.65X HD ScreenStar Wide Angle Conversion Lens	\$2,500

### Use Them Anywhere

Perfect for corporate, worship, home theatre or high-end gaming use - wherever brilliant color and the sharpest images are required.
